

Patricia,

I am writing in support of your efforts to secure large Douglas Fir trees for the Carter Creek stream corridor. SOLV and the TeamUp for Watershed Health program are committed to working with you and the Friends of Carter Creek for 8 years: 3 years of active restoration and 5 years of maintenance and monitoring. Together with hundreds of volunteers we have been able to remove tons of invasive plant species and plant over one thousand native trees and shrubs. The addition of large fir trees to act as a visual screen for neighbors living along the creek would be a tremendous addition to the overall project. Thank you for taking the lead on this important project to restore and enhance Carter Creek.

SOLV Coordinator
